

## New furniture fittings and light products at SIRO-discover diversity!

This year's Interzum in Cologne is centred on discovering diversity, a theme that has been SIRO's guiding principle for many years-whether designing furniture fittings, hooks or innovative lighting. Take a look at our products and discover a wide variety of fittings in different shapes and colours, as well as a large range of hooks, hook rails, and accessories. Or browse through our designs for recessed spots and customised LED strips that complement any colour scheme for an individual and harmonious all-round solution.

### 01 Knurled handles-stunningly unusual

In terms of finishes, SIRO has long been a market leader. This new collection of knurled handles and wardrobe elements is not only beautiful, but feels great. These fittings are available in our standard colours and in new on-trend shades.

## 02 Colour contrast in black and white

SIRO has embraced the current fashion for black, which now dominates in so many areas. Fittings and hooks in the contrasting colors black and white form a perfect complement to contemporary furniture and can be perfectly combined with the matching recessed spots.

### 03 Handle or handle strip-why choose?

SIRO's hybrid handles are the perfect combination of handle and handle strip, their minimalist design reflecting the latest trends. Place them in the middle of a door like a classic handle, or flush mount to the upper edge-it's your choice!

#### 04 Vintage colours for added atmosphere

New colour mixtures add that popular vintage flair and make a space extra special. We are particularly proud of our fittings and hooks in the colour Vintage Gold, which add sparkle to both old and new furniture.

### 05 Individual wardrobe design for every taste

Wardrobe elements in many different shapes, colours, and sizes; from hooks for hats and coats to umbrella stands. Our wide range of products allows each customer to individually design their own entrance area-and colour-coordinated handles, knobs and recessed spots can be added to complete the look.

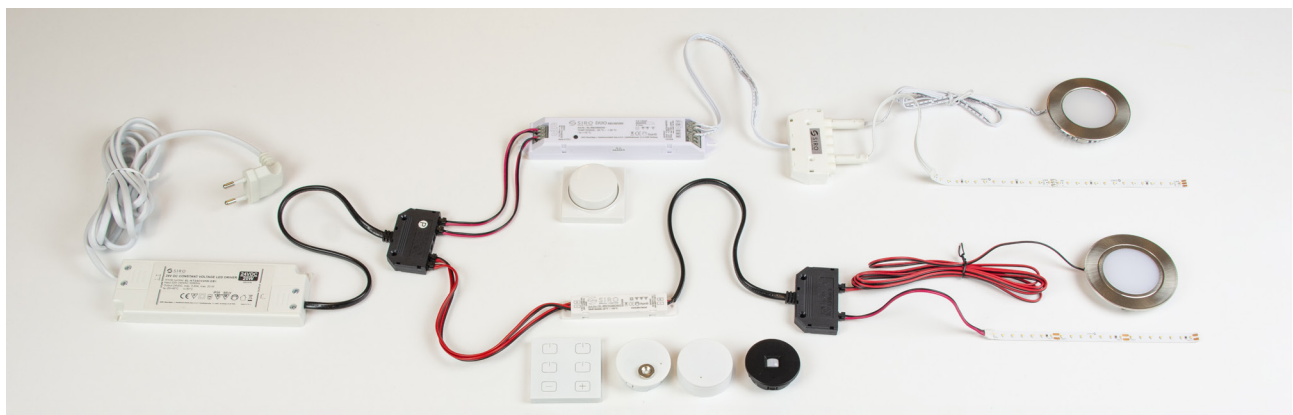

### 06 XXL LED strips light the way

There is nothing else like it on the market: these LED strips provide uniform illumination stretching up to 30 metres. They are available in two colour temperatures-warm white and neutral white-and are controllable and dimmable. The strips also have a high level of colour accuracy, with a CRI of over 90.

### 07 Plug-in systems-ambiance in next to no time

Why over-complicate things? Plug-in systems guarantee quick and easy installation.

## 08 Wireless sensors and zone controllers

These revolutionary battery-run sensors are available in touch, motion or magnetic versions. Small and compact, they are perfect for use on furniture. The zone controllers operate up to four MONO or DUO receivers and can be used to dim lights or change colour temperature.

## 09 Our Diamond Series of extra robust LED strips-tough as a diamond

Thanks to microchips and top-of-the-range technology, the Diamond Series provides an extraordinarily robust LED strip with guaranteed brilliant light quality and a high level of colour accuracy (CRI >95). These LED strips are available in warm white and neutral white, are controllable and dimmable, and are delivered as a plug-in system. A DUO light version even makes it possible to change the colour temperature.

### 10 Flexline-the flush-mounted solution for furniture

Our Flexline silicone profiles for SIRO LED strips are only 8 mm in width and can be flush mounted onto furniture. Flexline products emit a uniform, soft light, and are available either in MONO (warm white & neutral white) or DUO.

### 11 Microwave motion sensors for interiors

A microwave motion sensor can be integrated directly into the 230-volt power grid and detects movement even through non-metallic materials such as wood or plastic. The detection area is configured on an individual basis, making it perfect for unique interior design.

## 12 True colours-recess spots with seven different finishes

SIRO has offered an impressive variety of fitting finishes for over 70 years. This diversity is also reflected in the design of recessed spots, whose colours can be chosen to complement the fittings.
